Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/623,243

Applicant(s)

ALAWANI ET AL.

Examiner

Dameon E. Levi

Art Unit

2841

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05/23/2005 RCE.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,3-7,9-16 and 18-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,3-7,9-16 and 18-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3-7, 9-16, and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson et al US Patent 5969461 in view of Skipor et al US Patent 5720100

Regarding claim 1, Anderson et al discloses a module comprising:

a surface mount component situated over a laminate circuit board (for example, see elements 10, 16, Figs 1-3) the surface mount component comprising a first terminal and a second terminal (for example, see elements 20, Figs 1-3) ;

a first and a second pad situated on the laminate circuit board, (for example, see elements 18, Figs 1-3) the first pad being connected to the first terminal and the second pad being connected to the second terminal (for example, see elements 20, 18 Figs 1-3),

a solder mask trench (for example, see trench defined by elements 26, Figs 1-3)

situated underneath the surface mount component, wherein a solder mask trench is

situated over a top surface of the laminate circuit board (for example, see elements 26,

16, Figs 1-3), wherein a bottom surface of the surface mount component and the top

surface of the laminate circuit board form a moldable gap (for example, see elements 34,

Figs 1-3) the moldable gap including the solder mask trench (for example, see elements

Art Unit: 2841

34,26,32 Figs 1-3), wherein the moldable gap and the solder mask trench facilitate a flow of a molding compound underneath the surface mount component.

Anderson et al does not expressly disclose wherein the solder mask trench is filled with the molding compound.

Skipor et al discloses an apparatus wherein the solder mask trench is filled with the molding compound(for example, see elements 30,13,16 Figs 1-3).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the molding compound to fill the solder mask trench as taught by Skipor et al in the apparatus as taught by Anderson et al as molding compound tend to improve the connection reliability between the component and the circuit board(see Skipor et al, column 3, line 1- column 4, line 10)

Regarding claim 3, Anderson et al discloses the instant claimed invention except wherein the moldable gap is filled with the molding compound.

Skipor et al discloses an apparatus wherein the moldable gap is filled with the molding compound (for example, see elements 30,13,16 Figs 1-3).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the molding compound to fill the moldable gap as taught by Skipor et al in the apparatus as taught by Anderson et al as molding compound tend to improve the connection reliability between the component and the circuit board, as well as, to facilitate thermal dissipation from the component.

Regarding claim 4, Anderson et al discloses further comprising an overmold, the overmold being situated over the surface mount component (for example, see column 2, lines 11-17, Figs 1-3).

Regarding claim 5, Anderson et al discloses wherein the surface mount component is selected from the group consisting of a resistor, a capacitor, an inductor, a diplexer, a diode, and a SAW filter (for example, see elements 10, Figs 1-3, see columns 1-8)

Regarding claim 6, Anderson et al discloses wherein the moldable gap has a height of between approximately 45.0 micrometers and 65.0 micrometers (for example, see elements 34, Figs 1-3).

Regarding claim 7, Anderson et al discloses wherein the overmolded module is an MCM (for example, see elements 10, Figs 1-3, see columns 1-7).

Regarding claim 9, Anderson et al discloses a module comprising-

a surface mount component situated over a laminate circuit board (for example, see elements 10, 16, Figs 1-3), the surface mount component comprising a first terminal and a second terminal (for example, see elements 20, Figs 1-3); a first and a second pad situated on the laminate circuit board (for example, see elements 18, Figs 1-3), the first pad being connected to the first terminal and the second pad being connected to the second terminal, (for example, see elements 18, 20 Figs 1-3);

a moldable gap situated underneath the surface mount component, the moldable gap comprising a solder mask trench (for example, see elements 34, Figs 1-3), wherein the solder mask trench is situated over a top surface of the laminate circuit board (for example, see elements 26, 16, Figs 1-3), wherein the moldable gap and the solder

Art Unit: 2841

mask trench facilitate a flow of a molding compound underneath the surface mount component(for example, see elements 34,26,32 Figs 1-3).

Anderson et al does not expressly disclose wherein the solder mask trench is filled with the molding compound.

Skipor et al discloses an apparatus wherein the solder mask trench is filled with the molding compound(for example, see elements 30,13,16 Figs 1-3).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the molding compound to fill the solder mask trench as taught by Skipor et al in the apparatus as taught by Anderson et al as molding compound tend to improve the connection reliability between the component and the circuit board(see Skipor et al, column 3, line 1- column 4, line 10)

Regarding claim 10, Anderson et al discloses the instant claimed invention except wherein the moldable gap is filled with the molding compound.

Skipor et al discloses an apparatus wherein the moldable gap is filled with the molding compound (for example, see elements 30,13,16 Figs 1-3).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the molding compound to fill the moldable gap as taught by Skipor et al in the apparatus as taught by Anderson et al as molding compound tend to improve the connection reliability between the component and the circuit board, as well as, to facilitate thermal dissipation from the component.

Art Unit: 2841

Regarding claim 11, Anderson et al discloses further comprising an overmold, the overmold being situated over the surface mount component (for example, see column 2, lines 11-17, Figs 1-3).

Regarding claim 12, Anderson et al discloses wherein the overmold comprises the molding compound (for example, see column 2, lines 11-17, Figs 1-3).

Regarding claim 13, Anderson et al discloses wherein the moldable gap has a height of between approximately 45.0 micrometers and 65.0 micrometers (for example, see elements 34, Figs 1-3).

Regarding claim 14, Anderson et al discloses wherein the surface mount component is selected from the group consisting of a resistor, a capacitor, an inductor, a diplexer, a diode, and a SAW filter (for example, see elements 10, Figs 1-3, see columns 1-8).

Regarding claim 15, Anderson et al discloses wherein the overmolded module is an MCM (for example, see elements 10, Figs 1-3, see columns 1-8).

Regarding claim 16, Anderson et al discloses a module comprising:

a surface mount device situated over a laminate circuit board (for example, see elements 10, 16, Figs 1-3), the surface mount device comprising a plurality of terminals (for example, see elements 20, Figs 1-3); a plurality of pads situated on the laminate circuit board (for example, see elements 18, Figs 1-3), each of the plurality of pads being connected to a respective one of the plurality of terminals (for example, see elements 20, 18, Figs 1-3);

a solder mask trench situated underneath the surface mount device (for example, see elements 34, 10, Figs 1-3), wherein the solder mask trench is situated over a top

Art Unit: 2841

surface of the laminate circuit board(for example, see elements 26, 16, Figs 1-3), wherein the moldable gap and the solder mask trench facilitate a flow of a molding compound underneath the surface mount component(for example, see elements 34,26,32 Figs 1-3).

Anderson et al does not expressly disclose wherein the solder mask trench is filled with the molding compound.

Skipor et al discloses an apparatus wherein the solder mask trench is filled with the molding compound(for example, see elements 30,13,16 Figs 1-3).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the molding compound to fill the solder mask trench as taught by Skipor et al in the apparatus as taught by Anderson et al as molding compound tend to improve the connection reliability between the component and the circuit board(see Skipor et al, column 3, line 1- column 4, line 10)

Regarding claim 18, Anderson et al discloses wherein the surface mount device is a leadless surface mount device (for example, see elements 10, Figs 1-3, see columns 1-7).

Regarding claim 19, Anderson et al discloses wherein the surface mount device comprises at least one component, the at least one component being selected from the group consisting of an active component and a passive component (for example, see elements 10, Figs 1-3, see columns 1-7).

Regarding claim 20, Anderson et al discloses wherein the overmolded module is an MCM (for example, see element 10, Figs 1-3).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dameon E. Levi whose telephone number is (571) 272-2105. The examiner can normally be reached on Mon.-Fri. (9:00 - 5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kamand Cuneo can be reached on (571) 272-1957. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
